US-08403-888A-33/C
Sequence 33, Application US/0840388BA
Patent No. 5952490
GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: Oligonucleotides Having A Conserved G4 Core
TITLE OF INVENTION: Sequence
NUMBER OF SEQUENCES: 146
CORRESPONDENCE ADDRESS:
ADDRESSEE: Woodcock Washburn Kurtz Mackiewicz & No. 5952490ris LLP
STREET: One Liberty Place - 46th Floor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

Sequence 64, Application US/09106038A

Patent No. 607995
GENERAL INFORMATION:
APPLICANT: Brenda F. Baker and Lex M. Cowsert
TITLE OF INVENTION: ANTISTUSE MODULATION OF THERI
TITLE OF INVENTION: EXPRESSION
NUMBER OF SEQUENCES: 91
CORRESPONDENCE ADDRESS:
ADDRESSEB: Isis Pharmaceuticals, Inc.
STREET: 2592 Faraday Avenue
CITY: Carlsbad
STATE: CA
COMPUTR: Lab PC compatible
COMPUTER READABLE FORM:
MEDIUM TYPE: 35.5 inch disk, 1.44 Mb
COMPUTER: IBM PC compatible
COMPUTER: IBM PC compatible
COMPUTER: IBM PC compatible
COMPUTER: June 26, 1998
FILING DATE: June 26, 1998
CLASSIFICATION NUMBER: US/09/106,038A
FILING DATE: June 26, 1998
CLASSIFICATION NUMBER: 37.280

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 151, Application US/08457648

Patent No. 5639871

GENERAL INFORMATION:
APPLICANT: Bauer, Heidi M.
APPLICANT: Gravitt, Patti E.
APPLICANT: Gravitt, Patti E.
APPLICANT: Imparaim, Chaka C.
APPLICANT: Manos, M. Michele
APPLICANT: Resnick, Robert M.
TITLE OF INVENTION: Detection of Human Papillomavirus by the TITLE OF INVENTION: Polymerase Chain Reaction
NUMBER OF SEQUENCES: 298
CORRESPONDENCE ADDRESS:
                         APPLICANT: Greer, Catherine E.
APPLICANT: Impraim, Chaka C.
APPLICANT: Impraim, Chaka C.
APPLICANT: Manos, M. Michele
APPLICANT: Reanick, Robert M.
TITLE OF INVENTION: Detection of Human Papillomavirus by the
TITLE OF INVENTION: Polymerase Chain Reaction
NUMBER OF SEQUENCES: 298
CORRESPONDENCE ADDRESS:
ADDRESSES: Hoffmann-La Roche Inc.
STREET: 340 Kingsland Street
CITY: Nutley
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               DB 1; Length 23;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Indels
                                                                                                                                                                                                                                                                                                                   COUNTRY: NULLEY

Sequence 116, Application US/08403888A
Patent No. 5952490
GENERAL INFORMATION:
APPLICANT: Hancack et al.
TITLE OF INVENTION: Oligonucleotides Having A Conserved G4 Core
TITLE OF INVENTION: Sequence
NUMBER OF SEQUENCES: 146
CORRESPONDENCE ADDRESS:
ADDRESSEE: Woodcock Washburn Kurtz Mackiewicz & No. 5952490ris LLP
STREET: One Liberty Place - 46th Floor
CITY: Philadelphia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Length 24;

Sequence 109, Application US/08403888A

Patent No. 5952490

GENERAL INFORMATION:

APPLICANT: Hanecak et al.

TITLE OF INVENTION: Oligonucleotides Having A Conserved G4 Core

TITLE OF INVENTION: Sequence

NUMBER OF SEQUENCES: 146

CORRESPONDENCE ADDRESS:

ADDRESSE: Woodcock Washburn Kurtz Mackiewicz & No. 5952490ris LLP

STREET: One Liberty Place - 46th Floor

CITY: Philadelphia
                                                                                                                                                                                                     RESULT 55

Patent INFORMATION:
APPLICANT: Ribozywe Pharmaceuticals, Inc.
APPLICANT: Pavco, Pam
APPLICANT: Stinchomb, Dan
APPLICANT: Stinchomb, Dan
APPLICANT: Scobedo, Jaime
APPLICANT: Escobedo, Jaime
APPLICANT: Escobedo, Jaime
APPLICANT: Levels of Vascular Endothelial Growth Factor Receptor
ITLE OF INVENTION: Levels of Vascular Endothelial Growth Factor Receptor
FILE REFERENCE: MBHB00,976-70 (237/198)
CURRENT APPLICATION NUMBER: US 60/005,974
PRIOR FILING DATE: 1996-10-26
PRIOR FILING DATE: 1996-10-8
NUMBER OF SED ID NOS: 14225
SOFTWARE: PatentIn version 3.0

CLASSIFICATION: 514
PRIOR APPLICATION DATA:
APPLICATION NUMBER: 04/292,345
FILING DATE: August 17, 1994
CLASSIFICATION: 114
ATTORNEY/AGENT INFORMATION:
ATTORNEY/AGENT INFORMATION:
NAME: Jackson E8q., David A.
REGISTRATION NUMBER: 26,742
REFERENCE/DOCKET NUMBER: 600-1-087 CIP2I
REFERENCE/DOCKET NUMBER: 600-1-087 CIP2I
REFERENCE/DOCKET NUMBER: 600-1-087 CIP2I
RELECOMMUNICATION INFORMATION:
TELEPHONE: 201 487-5800
TELEFAX: 201 343-1684
TELEX: 13351
INFORMATION FOR SEQ ID NO: 45:
SEQUENCE CHARACTERISTICS:
LENGTH 18 base pairs
TYPE: nucleic acid
STRANDENNES: single
TOPOLOGY: linear
MOLECULE TYPE: DAMA (primer)
DESCRIPTION: Sequence tagged-site specific PCR primer sWSS2359
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DB 1; Length 18;

Sequence 45, Application US/08488225A

Patent No. 6471956

GENERAL INFORMATION:

APPLICANT: THE NOCKEFELLER UNIVERSITY

TITLE OF INVENTION: WOULDATORS OF BODY WEIGHT, CORRESPONDING

TITLE OF INVENTION: WOLLEIC ACIDS AND PROTEINS, AND DIAGNOSTIC AND THERAPEUTIC USE

NUMBER OF SEQUENCES:

ADDRESSE: Alauber & Jackson

STREET: 411 Hackensack Avenue

CITY: Hackensack Avenue

COMPUTER: New Jersey

COMPUTER: New Jersey

COMPUTER: IBM PC compatible

COMPUTER: IBM PC compatible

COMPUTER: IBM PC COMPATIONS SYSTEM: PC-DOS/MS-DOS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       US-08-709-588-1

Sequence 1, Application US/08709368

Patent No. 5910410

GENERAL INFORMATION

TIPLE OF INVENTION: Dual Tag Binding Assay
NUMBER OF SEQUENCES: 3

CORESPONDENCE ADDRESS:
ADDRESSE: Hewlett Packard Co.
STREET: CA

CITY: Palo Alto
STREET: CA

COMPUTRY: U.S.A.

ZIP: 94304-1126

COMPUTRY: BEADABLE FORM:
MEDIUM TYPE: Diskette -- 3.50 inch, 1.4 Mb s

COMPUTRY: IBM PC/XT/AT

OPERATING SYSTEM: WS-DOS

SOFTWARE: No. 5910410epad

CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/709,368

FILING DATE: 06-SEP-1996

INFORMATION FOR SEQ ID NO: 1:
SEQUENCE CHARACTERISTICS:
IERNGTH: 20 base pairs
PRIOR APPLICATION NUMBER: 60/151,977
PRIOR FILING DATE: 1999-09-01
NUMBER OF SEQ ID NOS: 287
SOFTWARE: FastSEQ for Windows Version 4.0
SEQ ID NO 137
LENGTH: 20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1130 CCTTCACCTCCAGCTCCAC 1148
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        TYPE: nucleic acid

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         RESULT 132
US-09-205-204-18
Sequence 18, Application US/09205204
Patent No. 598872
GENERAL INFORMATION:
APPLICANT: C. Frank Bennett
APPLICANT: Elizabeth J. Ackermann
APPLICANT: Elizabeth J. Ackermann
APPLICANT: Ex M. Cowsert
TITLE OF INVENTION: ANTISENSE MODULATION OF CURRENT APPLICATION NUMBER: US/09/205,204
CURRENT APPLICATION NUMBER: US/09/205,204
CURRENT APPLICATION NUMBER: US/09/205,204
CURRENT PILING DATE: 1998-12-03
NUMBER OF SEQ ID NOS: 47
LENGTH: 18
HAPLICANT: SHANNON, MAZK

TITLE OF INVENTION: MYOSIN-LIKE GENE EXPRESSED IN HUMAN HEART AND MUSCLE
FILE REFERENCE: AEOMICA-7
CURRENT APPLICATION NUMBER: US/09/866,108A
CURRENT FILING DATE: 2001-05-26
FRICK APPLICATION NUMBER: US 60/207,456
FRICK APPLICATION NUMBER: US 60/236,359
FRICK APPLICATION NUMBER: DC 626

Squence 72, Application US/09135021A
Patent No. 6150104
GENERAL INFORMATION:
APPLICANT: Splawski, Igor
TITLE OF INVENTION: A HOMOZYGOUS MUTATION IN KVLQT1 WHICH CAUSES JERVELL
TITLE OF INVENTION: AND LANGE-NIELSEN SYNDROME
TITLE OF INVENTION: AND LANGE-NIELSEN SYNDROME
FILE REPERENCE: 2323-128
CURRENT FILING DATE: 1999-081-7
GURRENT FILING DATE: 1999-081-7
EARLIER FILING DATE: 1999-06-13
EARLIER PILING DATE: 1999-06-13
EARLIER PILING DATE: 1999-07-29
NUMBER OF SEQ ID NOS: 80
SOUTHWARE: PatentIn Ver. 2.0
                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

Sequence 24, Application US/09213767

Sequence 24, Application US/09213767

Patent No. 5948680

JOHN BERRAL INFORMATION:
APPLICANT: Brenda F. Baker

APPLICANT: Lex M COWSert

TITLE OF INVENTION: ANTISENSE MODULATION OF ELK-1 EXPRESSION
FILE REPERRACE: RTS-0024

CURRENT APPLICATION NUMBER: US/09/213,767

CURRENT FILING DATE: 1998-12-17

WIMBER OF SEQ ID NOS: 47

SEQ ID NO 24

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 74, Application US/09135020

Sequence 74, Application US/09135020

Patent No. 6274332

GENERAL INFORMATION:

APPLICANT: Stating, Mark T.

APPLICANT: Saplawski, USO*

TITLE OF INVENTION: MUTATIONS IN THE KCNEI GENE ENCODING HUMAN mink WHICH

TITLE OF INVENTION: MUTATIONS IN THE KCNEI GENE ENCODING HUMAN mink WHICH

TITLE OF INVENTION: KCNEI AS AN LOT GENE

FILE REFERENCE: 2323-131

CURRENT APPLICATION NUMBER: US/09/135,020

CURRENT FILING DATE: 1998-08-17

EARLIER FILING DATE: 1998-08-17

SARLIER FILING DATE: 1996-10-29

EARLIER FILING DATE: 1996-10-29

EARLIER FILING DATE: 1996-12-22

EARLIER FILING DATE: 1996-07-29

NUMBER OF SEQ ID NOS: 114

EARLIER RILLY OF SEQ ID NOS: 114

EARLIER PILING DATE: 1998-07-29

NUMBER OF SEQ ID NOS: 114

| GENERAL INFORMATION:
| APPLICANT: Jarvis, Thale
| APPLICANT: Jarvis, Thale
| APPLICANT: McGwiggen, James
| TITLE OF INVENTION: INDUCTION OF GRAFT TOLERANCE
| TITLE OF INVENTION: AND REVERSAL OF IMMUNE RESPONSES
| UNMERS OF SEQUENCES: 2751
| CORRESPONDENCE ADDRESS:
| ADDRESSEE: Lyon & Lyon
| STREET: 633 West & Lyon
| STREET: 531 West & Lyon
| STREET: 531 West & 11th Street
| STREET: California | STATE: California | STATE:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Length 15;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  0; Indels

Patent No. 5932780
GENERAL INFORMATION:
APPLICANT: Soreq, Hermona
APPLICANT: Zakut, Haim
APPLICANT: Shani, Moshe
TITLE OF INVENTION: TRANSGENIC ANIMAL ASSAY SYSTEM FOR
TITLE OF INVENTION: ANICHOLINESTERASE SUBSTANCES
NUMBER OF SEQUENCES: 27
APPLICANT: Stinchcomb, Dan T.
APPLICANT: Drager, Kenneth
APPLICANT: Drager, Kenneth
APPLICANT: Jarvis, Thale
APPLICANT: Jarvis, Thale
TITLE OF INVENTION: METADOS AND COMPOSITIONS FOR
TITLE OF INVENTION: CANCER USING RIBOZYMES
NUMBER OF SECURNCES: 2627
CORRESPONDENCE ADDRESS:
ADDRESSEE: Lyon & Lyon
STREET: Saive 4700
CITY: Los Angeles
COMPUTER: May 18, 1994
APPLICATION NUMBER: 07/997, 132
